

The *Magaziner*<sup>®</sup> combines the worlds of light, reading and living in a synthesis of lamp and furniture accessoire.

This unique ball bearing is covered with a layer of chrome and presents itself as a unique design element and eye catcher.

As formerly created by Leonardo da Vinci here his

"moving development" - literally spoken – provides a perfect esthetical presentation of illumination and objects.

Designed in a strikingly unique style, it symbolizes not only functionality but furthermore combines simplicity and ingenuity and so most significantly renders homage to technology.

The *Magaziner* illuminates the room evenly and brilliantly without dazzling. Two cones of solid satinized glass in combination with advanced light technology create the perfect ambience and also demonstrate a contemporary solution. The top of the *Magaziner* is revolvable – while turning with bright illumination - magazines and brochures are being presented in a most appealing way. The classical dilemma of previous models - high clarity and variability in combination with a minimum of space requirement - is solved by this patented new development using a fan-shaped arrangement of the journals. The modular construction and a satinized acryl glass plate (optional) let the *Magaziner* transform itself immediately to an unique translucent glass table, - illuminated, rotating and designed for stylish ambience. The *Magaziner* combines style and functionality with genius and embodies the avantgarde of a modern and innovative design.

# Magaziner®

## Spezifikationen

Model:	TRICONIA
Functions:	- room lamp - magazine rack - glass table (optional)
Diameter:	500 mm
Height:	500 mm
Material:	solid satinized glass
Ball bear:	axial, inner illuminated
Illumination:	2 energy saving bulbs
Room lamp:	Osram Circolux 24 Watt
Cone lamp:	LED-bulb (new generation)
Voltage:	220 - 240 V
Capacity:	up to 20 magazines
Weight:	8 kg, 17.6 lbs

*Reading at its best*
